## Research Experience

### Research Assistant, Speech Processing and Machine Learning Lab, with Prof. Hung-yi Lee

09/2016 - PRESENT

*Open-Set Multi-Speaker Speech Separation (Ongoing)*

- Proposed to use the [phase in complex domain](#) to improve performance.

*Multivariate Time Series (MTS) Forecasting*

- Proposed the [temporal pattern attention](#) for MTS forecasting which use CNNs to extract [temporal patterns across multiple time steps](#), instead of a single time step as in traditional attention mechanisms.
- Verified by toy examples, our attention is able to attend on multiple time steps and handle interdependencies between series.
- Achieved state-of-the-art performance on a wide range of MTS datasets, including polyphonic music notes.

*Natural Language Processing*

- Researched a chat-bot with [seq2seq model with deep reinforcement learning](#) on the Cornell movie dialog corpus.
- Researched the CycleGAN paradigm with LSTM to train unpaired machine translation.

### Research Assistant, Electronic Design Automation Lab, with Prof. Yao-Wen Chang

02/2016 - PRESENT

*Bivariate Gradient-based Wirelength Model*

- Proposed a [novel bivariate gradient-based wirelength model](#) for global placement which combines the [advantages of bivariate and multivariate functions](#).
- Our wirelength model outperforms previous bivariate and state-of-the-art multivariate wirelength models.

*Topology-Matching Bus Routing*

- Proposed and implemented the [DAG-based topology-matching bus routing engine](#) and won the top 10 at 2018 ICCAD CAD contest.
- Our algorithm outperforms the all participants of 2018 ICCAD CAD contest, where the 1st place router result in 145% higher cost than ours.

*Initial Detailed Routing [ICCAD 18]*

- Proposed and implemented the [multithreaded initial detailed routing engine that considers global guides](#) and won the 3rd place at the 2018 ISPD contest.
- The multithreaded scheme speeds the engine up almost proportional to the number of threads.
- Our algorithm surpassed the winner of 2018 ISPD contest by 23%.

### Undergraduate Researcher, Speech Processing Lab, with Prof. Lin-shan Lee

09/2017 - 09/2018

*Reinforcing Reinforcement Learning by Rule-based Teacher*

- Applied computer vision technique to guide a rule-based Slither.io agent.
- Researched the combination of a [rule-based teacher to guide a Slither.io agent](#) by Asynchronous Advantage Actor Critic (A3C) which surpassed rule-based model.

### Software Engineering Intern, Synopsys, Inc.

07/2016 - 08/2016

*Single Layer Global Routing*

- Researched and implemented a [single layer global routing algorithm](#) based on mixture of previous literature and own thoughts.
- The algorithm successfully routed many real industrial cases.
